

# Liebert® GXTMT+ LX (3 X 3)

10 kVA

Powerful and Robust UPS

## Key Features

- True Online Double-conversion UPS
- Embraces the latest DSP processor which guarantees high performance
- Output power factor 0.9
- Active input power factor correction in all phases
- 50 Hz/60 Hz frequency converter mode
- ECO mode operation for energy saving (ECO)
- Emergency power-off function (EPO)
- Generator compatible
- Multiple communication ports (SNMP+USB+RS-232) for remote monitoring and management
- 3-stage extendable charging design for optimized battery performance
- Adjustable battery numbers for long-run model
- Integrated Maintenance Bypass Breaker
- Scalable up to 30 kVA
- Caster wheels for easy repositioning

*The Liebert® GXTMT+ LX (3 X 3) is a True Online Double-conversion UPS with extended runtime capabilities which offers multi-layer power protection and provides continuous reliable power to your mission critical loads.*

## Description

The Liebert® GXTMT+ LX (3 X 3) is designed to be the most compact and reliable UPS. It's best-in-class efficiency, robustness, and simplified installation & operations offers protection and continuous power to your mission-critical infrastructure.

The ultimate level of engineering and dynamics that have gone beyond the development of this UPS makes it a high performance system with proven reliability, giving you ultimate peace of mind.

## Application

### Smart City

- Monitoring System
- Signaling System
- Communication System
- Emergency Command System

### IT application

- Computing Servers
- Network Switches
- Storage Devices
- Workstations

### Business

- ATM Machine
- POS System
- Vending Machine
- Large LED Screen

### Equipment

- Signal System
- Ticket Vending Machine
- PLC Automation Devices
- Scientific Instrument

## Technical Specifications

| MODEL                   | GXTMT+ 10 kVA LX (3 X 3)                     |                                                                           |
|-------------------------|----------------------------------------------|---------------------------------------------------------------------------|
| Rating                  | 10 kVA/9 kW (3 in - 3 out)                   |                                                                           |
| System Parameter        | Technology                                   | IGBT based double conversion PWM based online UPS                         |
|                         | Parallel Mode                                | 3 UPS                                                                     |
|                         | Installation Mode                            | Tower                                                                     |
| Input                   | Rated Voltage                                | 400 VAC 3-phase, 4-wire                                                   |
|                         | Voltage Range                                | Three phase 305 VAC - 520 VAC                                             |
|                         | Rated Frequency                              | 50 Hz/60 Hz                                                               |
|                         | Input THDi                                   | <5%(1)                                                                    |
|                         | Frequency Range                              | 46 Hz to 54 Hz, 56 Hz to 64 Hz                                            |
|                         | Power Factor                                 | 0.99                                                                      |
| Output                  | Rated Power                                  | 10 kVA/9 kW                                                               |
|                         | Voltage                                      | Three Phase 400 VAC, 50 Hz                                                |
|                         | Frequency Synchronization Range              | Rated frequency±4 Hz. Configurable range: ±0.5 Hz ~ ±5 Hz                 |
|                         | Rated Power Factor                           | 0.9                                                                       |
|                         | Crest Factor                                 | 3:1                                                                       |
|                         | Output THDv                                  | < 2% linear load and 5% for non linear load                               |
|                         | Voltage Regulation                           | 1%                                                                        |
|                         | Dynamic response Recovery Time               | 60 ms                                                                     |
|                         | Inverter Overload Capability on Utility Mode | 100% to 110% - 10 min, 110 - 130% -1 min, >130% - 1 sec                   |
| Bypass                  | Inverter Overload Capability on Battery Mode | 100% to 110% - 30 sec, 110 - 130%-10 sec, >130% - 1 sec                   |
|                         | Separate Bypass                              | Yes                                                                       |
|                         | Maintenance Bypass                           | Inbuilt                                                                   |
| Efficiency              | Static Bypass                                | Inbuilt                                                                   |
|                         | ECO Mode                                     | 96%                                                                       |
